

# Accessibility Evaluation of Flipkart

**Tools Used:** Lighthouse, Manual Testing, NVDA Screen Reader

## Accessibility Score

66/100

## Key Issues Identified

Img. 1.0

**Problem** - Missing alt text for images – Screen reader could not describe images.

- **Solution** - Add descriptive alt attributes to all images.

**Example:** ``

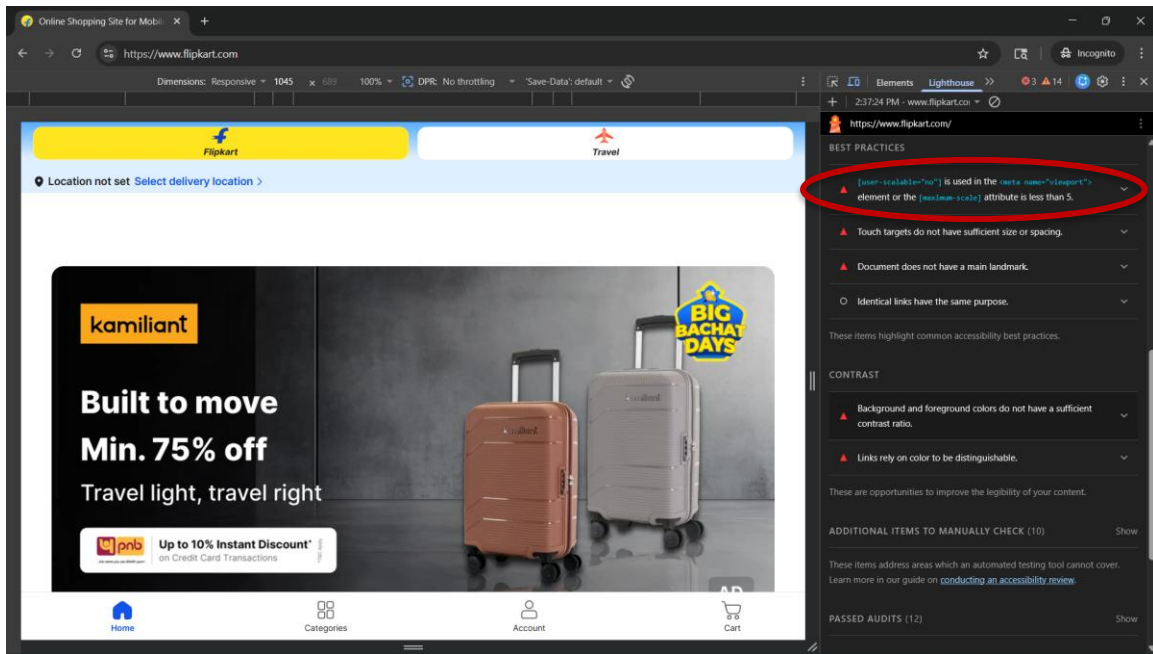

- Use meaningful descriptions instead of generic text like “image”.

**Problem** - Links without discernible names – NVDA announced unclear labels.

- **Solution** - Use descriptive link text.

**Example:** `<a href="/offers">View latest offers</a>`

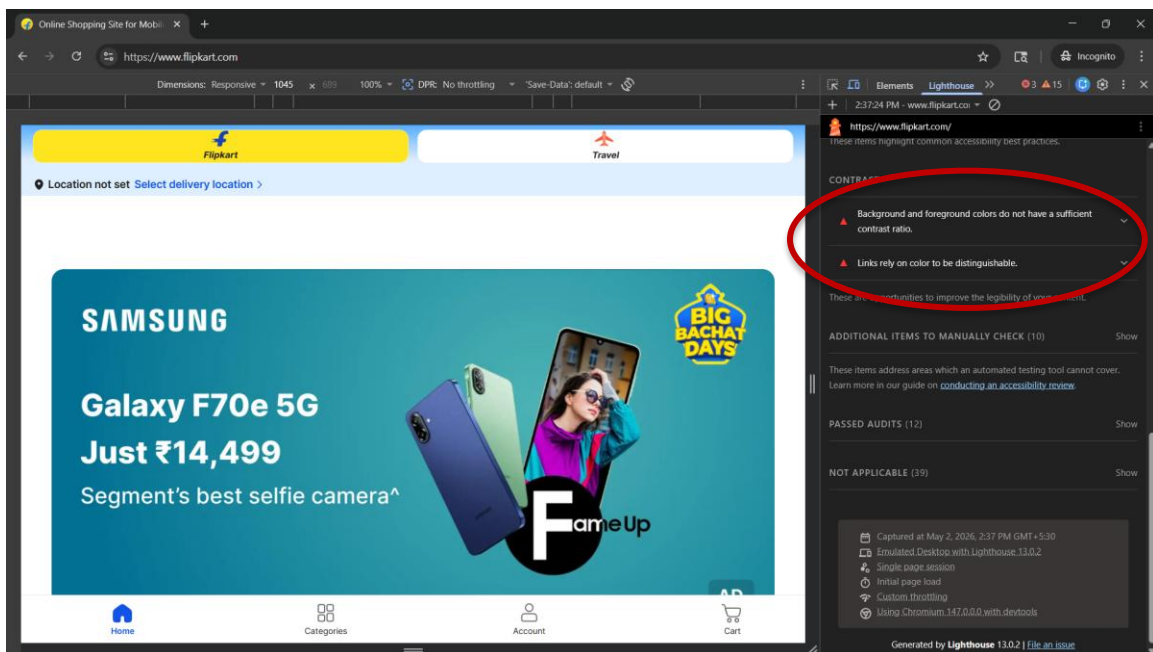

- Avoid vague labels like “Click here”.

Img. 1.1

- **Problem** - Zoom disabled using user-scalable=no.
  - **Solution** - Remove user-scalable=no from viewport meta tag.
 

**Example:** <meta name="viewport" content="width=device-width, initial-scale=1.0">
  - Ensure zooming is allowed up to at least 200%.

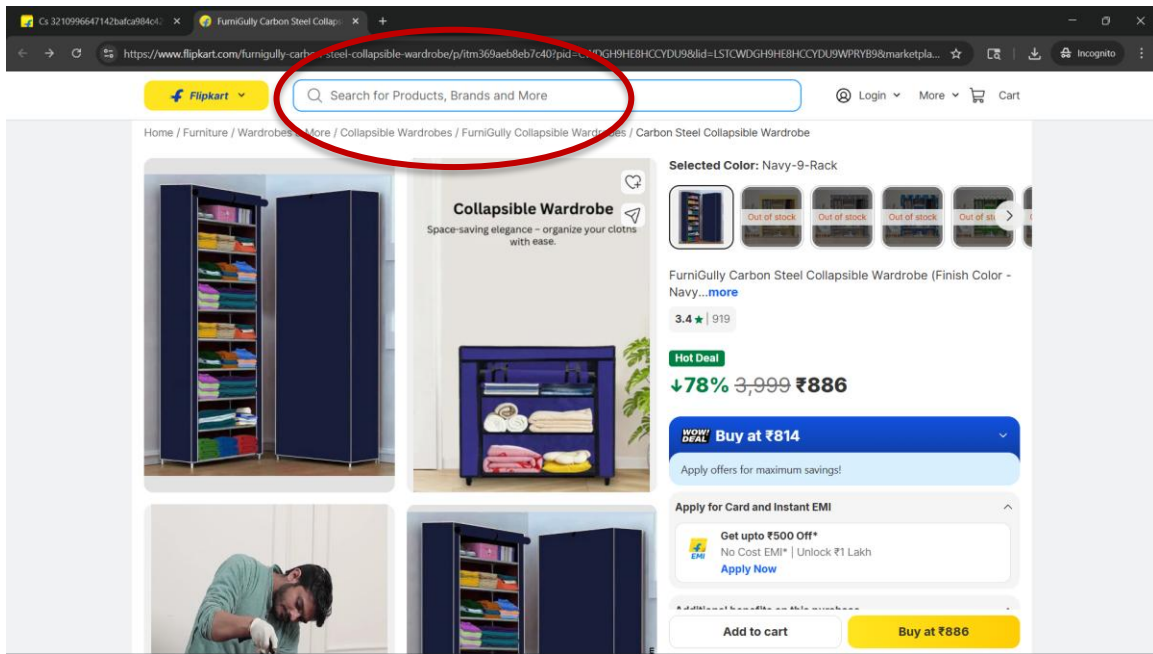

Img. 1.2

- **Problem** - Low color contrast affecting readability.
  - **Solution** - Follow WCAG contrast ratio:
 

Normal text: **4.5:1**

Large text: **3:1**

**Example:** Use tools like contrast checker to fix colors.
  - Replace light grey text with darker shades.

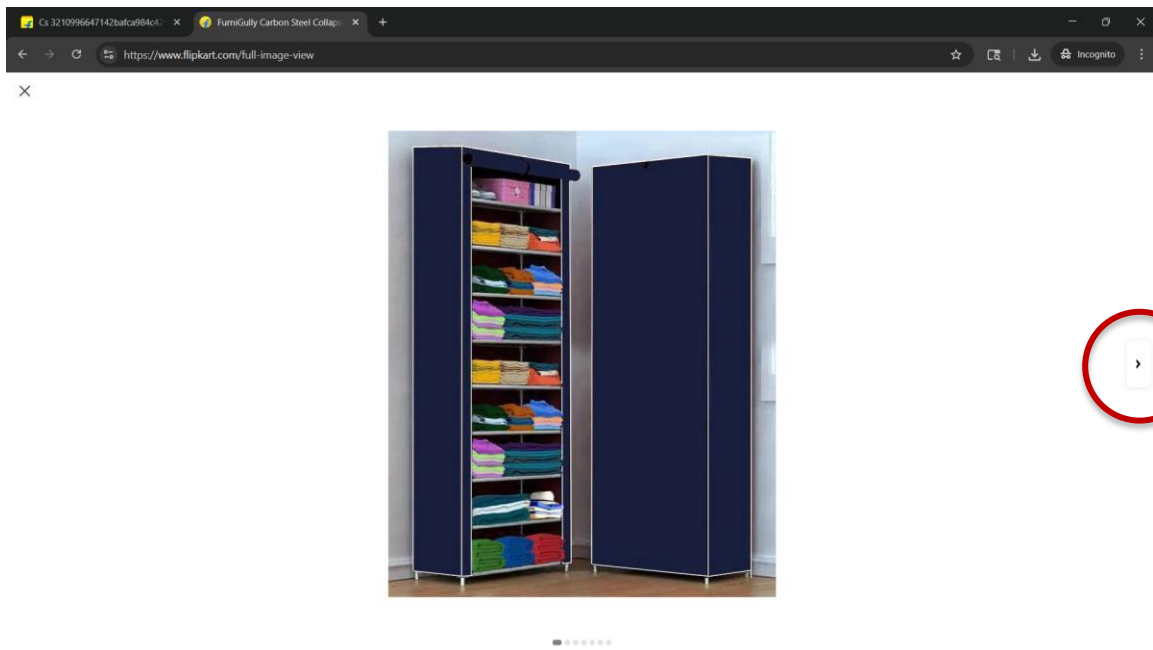

Img. 1.3

- **Problem** - Search bar not properly detected by screen reader.

- **Solution** - Add proper label or ARIA attributes.

**Example:** `<input type="text" aria-label="Search for Products, Brands and More">`.

Img. 1.4

- **Problem** - Interactive icons (like, share, image scroll) not accessible via NVDA or keyboard navigation.

- **Solution** - Add ARIA labels to icon and make elements focusable.

**Example:** `<button aria-label="Like product"> ❤️ </button>`

`<button aria-label="Share product"> 🔗 </button>`

- Ensure keyboard accessibility: `tabindex="0"`

## Conclusion

The website demonstrates moderate accessibility compliance but lacks proper implementation of screen reader support, semantic labeling, and keyboard accessibility. By applying improvements such as adding alt text, enhancing ARIA labels, enabling zoom, and improving contrast, the platform can significantly enhance usability for users with disabilities and align with WCAG accessibility standards.
